## Figure 1. Problem Statement

- Task: automatically determine breast density
   (A, B, C, D) from mammography data
- Data: Cancer Imaging Archive mammogram of 2864 images, with ground truth breast density
- Summary: 2D image multiple classification
- Approach: load DICOM, resize to 224 x 224, and design a modified VGG-16 network

## Figure 2. Network Architecture Design & Model Training

                                                                                                         [loss: 0.392,
Softmax Classify: A, B, C, D
                                         Epoch 9:
```

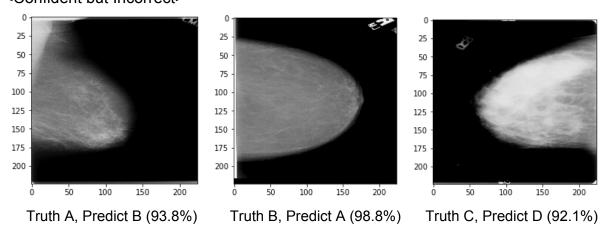

## Figure 3. Error Analysis

Analyzing these three categories is a quick way of understanding why an algorithm fails when it fails. Labels: Truth (ground truth density from radiologist), Predict (algorithm-predicted density), and % is algorithm's degree of confidence.

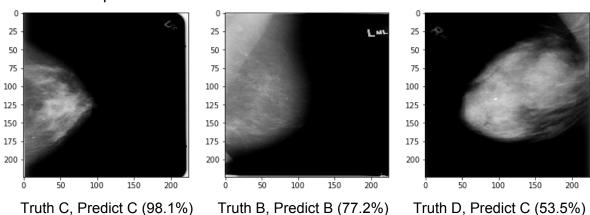

#### <Confident and Correct>

<Confident but Incorrect>

### <Random Samples>

Truth D, Predict C (53.5%)
